

CONUS

The CONUS, which was first introduced in 1995, is available in three sizes: for 8, 15 and 16 persons. Passengers are transported standing or seated. The gondola can be customized to meet individual requirements.

The CONUS is the perfect choice for summer and winter tourism. Thanks to its spherical shape, the gondola offers outstanding performance in wind. The wide doors keep loading times to a minimum, all the more so as passengers take their sports gear on board with them. The CONUS is ideally suited for wheelchair users and also for transporting goods.

General

The gondola can be used on monocable and bicable circulating systems as well as on jigbacks. As a world first, the CONUS 8 is also in operation as a rotating cabin for circulating systems. The cabin revolves around its own axis so that passengers get a unique ropeway experience with 360° panoramic views.

Automatic door

CWA automatic door actuator integrated in the gondola roof. Remote cable operation. Conformity with the relevant codes and standards. Hinged cover for easy access to the door actuator for maintenance purposes.

Engineering

CWA's tried and tested aluminum space frame technology. Spherical aluminum panels and glazing. 4-point suspension. The polycarbonate tinted windows are mounted in rubber gaskets for easy replacement at low temperatures.
